

## Tunnistus

No. 06330-21

University of Tartu (registry code 74001073, number of the notice of economic activities 169617) certifies that

## Leonardo David Soto Jacome

date of birth 23 April 1994

has completed the continuing education programme

## Estimation of Measurement Uncertainty in Chemical Analysis

P2AV.TK.652 26 hours (1 ECTS credit point) by the Office of Academic Affairs from 23 March 2021 to 4 May 2021

Annika Tina

Head of the Office of Academic Affairs Esta Pilt

Programme Director for Continuing Education

Tartu, 4 May 2021

A supplement is appended to the certificate

The supplement is valid together with the certificate no. 06330-21

1/1

## Leonardo David Soto Jacome

date of birth 23 April 1994

has completed the continuing education programme **Estimation of Measurement Uncertainty in Chemical Analysis** (P2AV.TK.652) from 23.03.2021 to 04.05.2021, 26 hours (1 ECTS).

Topic	Hours	Lecturer
The concept and origin of measurement uncertainty.  The basic concepts and tools (distribution functions, standard uncertainty, A and B type uncertainty estimates).  Principles of measurement uncertainty estimation (random and systematic effects and definitions for precision, trueness, accuracy).  Overview of the measurement uncertainty estimation approaches.  The ISO GUM modeling approach.  The single lab validation approach.  Comparison of different approaches.	26	Ivo Leito, Irja Helm

The student who has successfully passed the course knows

- the main concepts related to measurement results and measurement uncertainty, including their application to chemical analysis;
- the main mathematical concepts and tools in uncertainty estimation;
- the main measurement uncertainty sources in chemical analysis;
- the main approaches for measurement uncertainty estimation.

The student who has successfully passed the course is able to

- decide what data are needed for uncertainty estimation, understand the meaning of the available data and decide whether the available data are sufficient;
- select the uncertainty estimation approach suitable for the available data;
- quantify the uncertainty contributions of the relevant uncertainty sources using the available data;
- carry out estimation of uncertainty using the main approaches of uncertainty estimation

1 ECTS credit point corresponds to 26 hours
